

# IMSAI MANUFACTURING CORPORATION

February 1, 1977

Dear IMSAI owner:

We are pleased to make available to you a powerful extended scientific BASIC for your floppy disk system. The BASIC, developed at the Naval Post Graduate School in Monterey, is integrated with the IMSAI Disk Operating System (DOS-A). This BASIC is in the public domain. Although we have no current maintenance plan, we feel you will find this a useful and valuable programming tool.

It loads and runs under the DOS, requires a minimum 20K byte memory and includes random and sequential disk file record access. An 80-page user manual is included. We highly recommend this compiler BASIC as a programming tool for educational, scientific, hobbyist and some business applications.

If we have received your licensing agreement for DOS-A, you may acquire this BASIC and user manual at no cost by simply sending a diskette; or optionally, ordering a new diskette. A diskette, containing the latest version of DOS-A and BASIC-E will be returned.

Please use the enclosed form when requesting BASIC-E.

We look forward to supplying you with more exciting software in the near future.

Sincerely,  
IMSAI MANUFACTURING CORPORATION

Michael Stone  
Director of Marketing
